## Safespring

Scandinavian  
Company offering  
nordic IaaS and PaaS.

## Compliance

Regulatory compliance  
for GDPR. No data  
transfer to 3:rd countries

## Datacenter-security

Secure data center with  
100% renewable energy  
and focus on sustainability

## Open Standard

flexibility, control over data,  
interoperability, cost savings,  
data portability, innovation

Infrastructure as a service for all your compute and storage needs.

Safespring is a cloud service provider with a focus on security, compliance, and open standards.

By being based on open source and adhering to open standards, Safespring offers high compatibility, transparency, and security.

Safespring provides highly reliable and secure data centers, powered entirely by renewable energy sources for a truly green solution.

Our Stockholm Norr datacenter not only uses 100% green energy but also recycles its generated heat back into the district heating network, providing warmth for thousands of Stockholm homes each year.

This ongoing commitment to sustainable practices is echoed in our constant drive for more energy-efficient data center designs, including innovative measures like raising the floor levels to reduce cooling needs. With Safespring, you can trust in robust data center services that align with a sustainable and eco-friendly future.

# Building an Ecosystem of Open, Transparent, and Secure Cloud Services in Europe

The European market is undergoing a transformation towards an ecosystem of cloud services that prioritize openness, transparency, and security.

**Federation** Providing seamless access to infrastructure, platform, and application services.

**Standardized Interfaces** Adopting standardized API and functionality to simplify cloud service use.

**Decentralized Services** Creating resilient services spread out to minimize the risk of service disruptions.

Safespring, a trusted member of the EU federated ecosystem, prioritizes GDPR compliance, open standard interfaces, and digital sovereignty.

Our service offers you greater data control, improved performance, and enhanced protection, all while supporting local initiatives. We deliver resilient, decentralized services to minimize disruptions, with standardized interfaces for ease of use, giving you seamless access to various cloud services.

# Nordic public Cloud Platform

Safespring is the alternative that complies with laws and regulations within the EU.

## Compute

Servers in the Nordic cloud.  
Scale your infrastructure up or down as needed.

## s3 Storage

Cloud-based storage for large volumes is provided from secure Nordic data centers

## Container platform

Run Kubernetes or OpenShift on Safespring infrastructure, as a service or on your own.

## Database

Database as a service lets you deploy and access managed, secured database clusters.

## Backup

Robust enterprise-grade cloud backup for physical or virtual servers.

## AI and ML Services

Build modern solutions that utilize machine learning and artificial intelligence.

### Compute

Servers in the Nordic cloud.  
Scale your infrastructure up or  
down as needed.

### s3 Storage

Cloud-based storage for large  
volumes is provided from  
secure Nordic data centers

### Container platform

Run Kubernetes or OpenShift  
on Safespring infrastrucrure, as  
a service or on your own.

### Database

Database as a service lets you  
deploy and access managed,  
secured database clusters.

### Backup

Robust enterprise-grade cloud  
backup for physical or virtual  
servers.

### AI and ML Services

Build modern solutions that  
utilize machine learning and  
artificial intelligence.

Safespring offers bespoke infrastructure services, including Compute and Storage, as well as Backup-as-a-Service.

As part of our eco-system, our trusted partners provide various platform services such as container and database-as-a-service, alongside data scientist platforms for modeling and training of algorithms.

Combined with our green, renewable-energy powered data centers, we ensure high reliability, security, and sustainability for your cloud computing needs.

Safespring develops customer-centric services using modern DevOps practices and secure, ISO-27001-aligned processes.

Our infrastructure is built on reliable x86 architecture and robust open-source software.

Available via a user-friendly GUI or open API, our services support seamless automation, all within our eco-friendly, renewable-energy powered data centers.

# Main trends that re-shapes the IT infrastructure market

## Legislative landscape

Safespring offers GDPR-compliant services to enhance data governance, compliance, and transparency while protecting customer data.

## Open standards

Safespring cloud services prevent vendor lock-in and provide flexibility, control, and compliance through open standard interfaces.

## Data Sovereignty

Safespring cloud services comply with EU/local regulations and provide benefits such as data sovereignty, compliance, security, privacy, and cost savings.

## Disruptive market

eSam coordinates secure, efficient, and compliant cloud services for the Swedish public sector, co-developed with the industry.

Safespring presents a compelling alternative to global hyperscale cloud services, offering GDPR-compliant, European cloud services. These services ensure data sovereignty and adherence to EU regulations, improving data security and privacy while reducing latency.

Open standard interfaces allow flexibility, cost savings, and vendor-agnostic data control. Safespring supports the EU's Data Strategy 2030 and values open-source technology for its innovation potential. We're not just a service provider, but a partner, invested in the growth of the European cloud ecosystem and the local economy.

# Target market customer segments

**Private SaaS-companies** Safespring's customers offer SaaS solutions to R&E, Public, and Health Care sectors with strict compliance requirements.

**Research & Education** Safespring dominates the R&E market with unparalleled offerings and desirable framework agreements.

**The Public Sector** Safespring leverages its R&E position to establish a strong foothold in the Public sector's cautious compliance requirements.

**The Health Care Sector** Safespring processes and stores large amounts of personal data in a compliant manner, making it ideal for health care and R&E research projects.

# Target market customer segments

Safespring is a trusted cloud service provider targeting private SaaS companies, research and education institutions, the public sector, and the healthcare sector.

With unparalleled offerings and desirable framework agreements, we dominate the R&E market. Leveraging our R&E expertise, we establish a strong foothold in the public sector, meeting cautious compliance requirements.

Safespring's secure and compliant data processing makes us an ideal choice for healthcare and R&E research projects. Trust us for tailored solutions and unmatched support.
